## GUJARAT TECHNOLOGICAL UNIVERSITY BE - SEMESTER-VII • EXAMINATION - WINTER 2013

Subject Code: 171901
Date: 26-11-2013
Subject Name: Operation Research Time: $10.30 \mathrm{am} \mathbf{- 0 1 . 0 0} \mathbf{~ p m}$

Total Marks: 70

## Instructions:

1. Attempt all questions.
2. Make suitable assumptions wherever necessary.
3. Figures to the right indicate full marks.
Q. 1 (a) What are phases of OR Project, explain in detail brands of coffee plains A and B. The characteristics used in blending the coffee include strength, acidity and caffine. The test result of the available supply of Brazilian, Columbian and African coffee.

|  | Price/kg | Strength | Acidity | \%coffine | Supply <br> available |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Brazilian | 60 | 6 | 4 | 2 | 50000 |
| Columbian | 70 | 8 | 3 | 2.5 | 30000 |
| African | 65 | 5 | 3.5 | 1.5 | 25000 |

The requirement for A and B coffee are given as below.

| Plain <br> coffee | Price/kg | Min <br> strength | Max <br> acididty | Max <br> coffine | Quantity <br> Demanded |
| :--- | :---: | :---: | :---: | :---: | :---: |
| A | 75 | 6.5 | 3.8 | 2.2 | 65000 |
| B | 85 | 6.0 | 3.5 | 2 | 55000 |

Assume that 35000 kg of plains A and 25000 kg of plain B are to be sold formulate LP1
Q. 2 (a) Minimiza $=-3 \mathrm{x}_{1}+\hat{x}_{2}-2 \mathrm{x}_{3}$

Subjeg 10
$x_{1}+3 x_{2}+x_{3} \leq 5$
$2 \mathrm{x}_{1}-\mathrm{x}_{2}+\mathrm{x}_{3} \geq 2$
$4 x_{1}+3 x_{2}-2 x_{3}=5$
$x_{1}, x_{2}, x_{3} \geq 0$
(b) Consider the transportation problem shown in table below

Find the initial basic feasible solution using Northwest corner method

|  |  | 1 | 2 | 3 | 4 | 5 | supply |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| PLANT | 1 | 20 | 4 | 32 | 28 | 20 | 3000 |
|  | 2 | 12 | 36 | 24 | 26 | 32 | 5000 |
|  | 3 | 16 | 8 | 28 | 24 | 20 | 8250 |
|  | 4 | 28 | 44 | 40 | 16 | 36 | 3750 |
| Demand | 3500 |  |  |  |  |  |  |
| OR |  |  |  |  |  |  |  |

(b) Solve above method by Least cost cell method
Q. 3 (a) Consider the assignment problem shown in table below. In the problem 5 different jobs are to be assigned to 5 different operators such that the toal processing time is minimized. The matrix entries represent processing times in hours.
Develop a zero-one programming model.

|  | 1 | 2 | 3 | 4 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 20 | 24 | 30 | 24 | 16 |
| 2 | 14 | 32 | 28 | 28 | 22 |
| 3 | 26 | 28 | 14 | 18 | 18 |
| 4 | 24 | 20 | 22 | 26 | 20 |
| 5 | 16 | 26 | 30 | 22 | 30 |

(b) Solve above problem with Hungerian method

## OR

Q. 3 (a) Solve the below game theory problem with the concept of dominance method

|  | PLAYER B |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| PLAYER |  | I | II | III | IV |  |
|  | I | 3 | 5 | 4 | 2 |  |
|  | II | 5 | 6 | 2 | 4 |  |
|  | III | 2 | 1 | 4 | 0 |  |
|  | IV | 3 | 3 | 5 | 2 |  |

(b) Determine the solution of game for the pay-off matrix given below

|  | PLAYER B |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| PLAYER A |  | I | II | III |
|  | I | -3 | -1 | 7 |
|  | II | 4 | 1 | -2 |

Q. 4 (a) The initial cost of a machine is Rs 71000 and Scrape value is Rs 1000. The maintenance costs found from experience are as below.
Find when should the machine be replaced?

| Year | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Maintenance | 2000 | 3500 | 5000 | 7000 | 10000 | 13000 | 17000 | 21000 |

(b) Customers arrive at one window drive according to the poisons distribution with the mean 1010 minutes and service time per customer is exponential with mean of 0 ininutes. The space in front of the window can accommodate only three (whicles including the serviced one. Other vehicles have to wait outside respace. Calculate

- Prsability that an arriving customer can drive directly to the space in O.Ont of the window
- Probability that an arriving customer will have to wait outside the directed space
- How long an arriving customer is expected to wait before getting the service?

## OR

Q. 4 (a) Inventory control manager of a firm has collected the following data on one item

- Minimum total cost per annum = Rs. 16000
- Inventory holding cost per unit per year $=$ Rs. 4
- No of order per year $=10$
- Price per unit $=$ Rs. 25

Calculate annual demand of the item, procurement cost per order, inventory carrying cost as a percentage of average inventory investment and economic order quantity (EOQ)
(b) In a firm, the demand for a certain item is random. It has been established that the monthly demand of an item has a normal distribution with a mean of 1000 and a standard deviation of 150 units. The unit price of an item is Rs 20/-. The ordering cost is Rs $40 /$-, the inventory carrying cost is estimated to be $15 \%$ per
annum respectively. The procurement lead time is constant and is two months. Find the most economic ordering policy and the expected cost of controlling inventory given that the service level is $95 \%$.
Q. 5 (a) A small project is compsed of 7 activities whose time estimates are listed in the table below. Activities are identified by their beginning (i) and ending (j) node numbers

| Activity | Estimated duration (weeks) |  |  |
| :---: | :---: | :---: | :---: |
| $(\mathrm{i}-\mathrm{j})$ | Optimistic | Most likely | pessimistic |
| $1-2$ | 1 | 1 | 7 |
| $1-3$ | 1 | 4 | 7 |
| $1-4$ | 2 | 2 | 8 |
| $2-5$ | 1 | 1 | 1 |
| $3-5$ | 2 | 5 | 14 |
| $4-6$ | 2 | 5 | 8 |
| $5-6$ | 3 | 6 | 15 |

- Draw the network diagram of activities in the project
- Find the expected duration and variance of each activity. What is the expected project length?
- Calculate the variance and standard deviation of the project length.
(b) What do you mean by linear programming?

Define following terms : linear function, objective function, decision variable, constraints, feasible solution, optimal solution.

OR
Q. 5 (a) What is CPM and PERT. Discuss significance of using CPM and PERT.
(b) Define following terms with respect to CPM/PERT : event, merge event, burst
