

B. Tech. 7th Semester (Civil Engg.) Examination,

December-2011

DESIGN OF STEEL STRUCTURES-II

Paper-CE-401-E

Time allowed : 3 hours]

[Maximum marks : 100

Note : Attempt any five questions. All questions carry equal marks. Use of IS 800-1984 revised 2000, IS - 875 and Steel Tables are allowed. If any data is missing then assume the same.

1. Define shape factor. The collapse load for a steel beam is 40 kN and the service load is 28 kN. What is the load factor. 20
2. A fixed ended beam is subjected to load W at $1/3$ rd span as shown below :

Estimate the collapse load.

20

3. The roof slope of a roof truss in an industrial building is inclined at $22^\circ 30'$. Estimate the Live Load as per IS-875. 20

4. Design members AB, AC and joint A of a roof truss as shown partly below, for the following data

Member	Length	Comp. force	Tensile force
AB	2.3 m	75 kN	55 kN
AC	1.8 m	60 kN	80 kN

Design also welded connections at joint A. Use tubes of grade y_{st} 210. 20

5. (a) Name the elements of an Industrial building and discuss it. 12
- (b) How many types of loads act upon the roof trusses ? Detail it. 8

6. Design a rectangular water tank of capacity 1,50,000 litres supported over a 12 m high staging columns are supported over concrete pedestal M-15 conc. B.C. of soil is 100 kN/mm^2 . Design wind pressure is 1.05 kN/m^2 . Use plates of 1.25 width and 8.75 m length. 20

7. (a) Detail out the various steps for the design of self supporting steel stacks.
- (b) What do you understand by proportioning of stacks. 10+10
8. Write short notes on :
- (i) Loads on Transmission Towers
- (ii) Analysis of Tower and Guyed Masts. 6,6,8
9. A square box section $200 \text{ mm} \times 200 \text{ mm} \times 2 \text{ mm}$ is to be used as a column of effective length 4 m. Find max^m load it can carry.

20
