B.Tech. (CE) (Sem.-3)

ROCK MECHANICS & ENGINEERING

Subject Code : BTCE-302 (2011 Batch)

Paper ID : [A1114]

Time : 3 Hrs.

Max. Marks : 60

INSTRUCTION TO CANDIDATES :

1. SECTION-A is COMPULSORY consisting of TEN questions carrying TWO marks each.
2. SECTION-B contains FIVE questions carrying FIVE marks each and students has to attempt any FOUR questions.
3. SECTION-C contains THREE questions carrying TEN marks each and students has to attempt any TWO questions.

SECTION-A

I. Write briefly :

- i) Differentiate between HORST & GRABEN.
- ii) What are the typical characteristics of "P" Waves?
- iii) Draw a sketch of FOLD showing various parts.
- iv) What are the different causes of landslides?
- v) Between Sandstone and Limestone which rock is having higher porosity and why ?
- vi) What is Flat Jack Test used for ?
- vii) What are the different types of bolts used for Rock Bolting?
- viii) What is FROST ACTION?
- ix) What is an Angular Unconformity?
- x) What is Uniaxial compressive strength ?

[N-12] (2) 505

SECTION-B

2. Discuss features produced by River Erosion.
3. Describe MOH's scale of Hardness and its use in mineralogy.
4. How do you record an EARTHQUAKE?
5. Discuss in brief about Grouting technique.
6. Discuss use of Point Load Test in Anisotropy.

SECTION-C

7. Classify JOINTS based on Geometry. Discuss engineering consideration of joints.
8. Discuss depositional features produced by Glaciers with precautions required for engineering projects in glaciated terrain.
9. Using PLATE Bearing Test describe in detail, how in situ deformity of rocks is measured.
