Roll No: $\square$

# B- TECH <br> (SEM I) THEORY EXAMINATION 2020-21 <br> PHYSICS 

Time: 3 Hours
Total Marks: 100
Note: 1. Attempt all Sections. If require any missing data; then choose suitably.

## SECTION A

1. Attempt all questions in brief.
$2 \times 10=20$

| Qno. | Question | Mark <br> s | CO |
| :--- | :--- | :---: | :---: |
| a. | What are inertial and non-inertial frames of reference? Is an earth is inertial <br> or non-inertial frame? | 2 | 1 |
| b. | If one photon has a speed c in one reference frame, can it be at rest in some <br> other frame of reference explain? | 2 | 1 |
| c. | Give the physical signifance of equation of continuity. | 2 | 2 |
| d. | Calculate radiation pressure exerted by electromagnetic waves. | 2 | 2 |
| e. | Explain Black body radiation spectrum graph on the basis of quantum <br> physics. | 2 | 3 |
| f. | Explain why a thick film shows no color in reflected white light. | 2 | 4 |
| g. | Differentiate between $\Psi$ and Iّ̛I | 2 | 3 |
| h. | What is dispersive power of plane transmission grating? | 2 | 4 |
| i. | Why population inversion is necessary for laser action? | 2 | 5 |
| j. | What do you mean by dispersion in optical fiber? | 2 | 5 |

## SECTION B

2. Attempt any three of the following:

| Qno. | $\sqrt{\text { Question }}$ | Marks | CO |
| :---: | :---: | :---: | :---: |
| a. | A man leaves the earth in rocket ship that makes a round trip to the nearest star which is 4 light yors, away at speed of 0.8 c . How much younger will he be on his return that is ©, in brother who preferred to stay behind | 10 | 1 |
| b. | A 100 watt sodin lamp radiating its power. Calculate the electric field and magnetic fieldy trength at a distance of 5 m from the lamp. | 10 | 2 |
| c. | Show that the de-Broglie wavelength for a material particle of rest mass $\mathrm{m}_{0}$ and charge $q$ accelerated from rest through a potential difference $V$, relativistically is given by: $\lambda=\frac{h}{\sqrt{2 m_{0} q v\left(1+\frac{q v}{2 m_{0} c^{2}}\right)}}$ | 10 | 3 |
| d. | Interference fringes are produced by a monochromatic light falling normally on a wedge shaped film whose refractive index is 1.4. The angle of the wedge is 20 second of an arc and the distance between the successive fringes is 0.25 cm . Calculate the wavelength of light used. | 10 | 4 |
| e. | A glass clad fiber is made with core glass of refractive index 1.5 and the cladding is doped to give a fractional index difference of 0.0005 . Find: (a) The cladding index. (b)The critical internal reflection angle (c) The nu aperture. | $10$ <br> nerical | 5 |

Roll No: $\square$

## SECTION C

3. Attempt any one part of the following:

| Qno. | Question | Mark <br> s | C <br> O |
| :--- | :--- | :--- | :--- |
| a. | Describe Michelson Morley experiment and explain physical signifance of its <br> negative results. | 10 | 1 |
| b. | Show that the mass of a body depends on its velocity. Deduce an expression <br> for the Variation of mass with velocity. | 10 | 1 |

## 4. Attempt any one part of the following:

| Qno. | Question | Mark <br> s | CO <br> a.Derive the Maxwell equations in differential form and integral form with <br> physical signifance. |
| :--- | :--- | :--- | :--- |
| b. | What is poynting vector? How is the poynting theorem derived from Maxwell <br> equations? | 10 | 2 |

5. Attempt any one part of the following:

| Qno. | Question | Marks | CO |
| :--- | :--- | :--- | :--- |
| a. | What are the conditions and limitations, a wave function must obey? Derive <br> time independent Schrodinger equations. | 10 | 3 |
| b. | Discuss Compton effect and derive an expression for Compton shift with the <br> help of suitable diagram | 10 | 3 |

## 6. Attempt any one part of $\mathbf{t}$ (Hollowing:

| Qno. | Question | Mark <br> s | CO |
| :--- | :--- | :---: | :---: |
| a. | Discuss the pher onenon of interference of light due to thin films and find the <br> condition ofo maxima and minima. Show that the interference patterns of <br> reflected and transmitted monochromatic source of light are complementary | 10 <br> b.Discuss the phenomenon of Fraunhofer diffraction at a single slit and show <br> that the relative intensities of successive maximum are nearly <br> $1: 4 / 9 \pi^{2}: 4 / 25 \pi^{2}: 4 / 49 \pi^{2}$. | 10 |

7. Attempt any one part of the following:

| Qno. | Question | Mark <br> s | CO |
| :--- | :--- | :---: | :---: |
| a. | Analyse and describe the process of spontaneous and stimulated emission of <br> radiation with the help of diagram. Obtain an expression for <br> coefficients of spontaneous and stimulated emission of radiation | 10 <br> Einstein's |  |
| b. | Draw a neat diagram of He-Ne laser and describe its method of working? <br> How is it superior to a Ruby laser? | 10 | 5 |
