**B.TECH**  
**(SEM-VII) THEORY EXAMINATION 2019-20**  
**ENGINEERING HYDROLOGY**

Time: 3 Hours

Total Marks: 100

**Note:** Attempt Sections in any order as you wish. The marks are given in the right hand side of the question paper.

**SECTION A**

**1. Attempt 10 questions briefly.**

**2 x 10 = 20**

a.	Describe losses in well.
b.	What is flood routing?
c.	Define depression storage.
d.	Why is base flow separated from total runoff?
e.	What is return period?
f.	What is probable maximum precipitation?
g.	Define Unit Hydrograph.
h.	Describe rainwater harvesting.
i.	What do you mean by specific capacity?
j.	Give full form of PWP and define it.

**SECTION B**

**2. Attempt any three of the following:**

**10x3=30**

a.	What is meant by Probable Maximum Precipitation (PIIP) over a basin? Also explain, how PMP is estimated?
b.	Discuss briefly the various abstractions that take place from the precipitation.
c.	Derive the expression for discharge from the well in a confined aquifer.
d.	A catchment has five rain-gauge stations. In a year, the annual rainfall recorded by the gauges is 89 cm, 90 cm, 90.5 cm, 103 cm and 91 cm. For a 5% error in the estimation of the mean rainfall, determine the additional number of gauges needed.
e.	List various direct methods of measurement of consumptive use of water.

**SECTION C**

**3. Attempt any one part of the following:**

**10x1=10**

a.	The following table gives values of measured discharges at a stream gauging site in a year. Upstream of the gauging site a weir built across the stream diverts 3.0 Mm <sup>3</sup> and 0.50Mm <sup>3</sup> of water per month for irrigation and for use in an industry respectively. The return flows from the irrigation is estimated as 0.8 Mm <sup>3</sup> and, from the industry at 0.30 Mm <sup>3</sup> reaching the stream upstream of the gauging site. Estimate the natural flow, if the catchment area is 180 km <sup>2</sup> and the average annual rainfall is 185 cm, determine the runoff-rainfall ratio.																										
	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <tr><th>Month</th><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td>11</td><td>12</td></tr> <tr><th>Gauge Flow(Mm<sup>3</sup>)</th><td>2</td><td>1.5</td><td>0.8</td><td>0.6</td><td>2.1</td><td>8.0</td><td>18.0</td><td>22.0</td><td>14.0</td><td>9.0</td><td>7.0</td><td>3.0</td></tr> </table>	Month	1	2	3	4	5	6	7	8	9	10	11	12	Gauge Flow(Mm <sup>3</sup> )	2	1.5	0.8	0.6	2.1	8.0	18.0	22.0	14.0	9.0	7.0	3.0
Month	1	2	3	4	5	6	7	8	9	10	11	12															
Gauge Flow(Mm <sup>3</sup> )	2	1.5	0.8	0.6	2.1	8.0	18.0	22.0	14.0	9.0	7.0	3.0															
b.	During a flood flow the depth of water in a 10m wide rectangular channel was found to be 3.0m and 2.9m at two sections 100m apart. The drop in the water surface elevation was found to be 0.12m. Assuming Manning's coefficient to be 0.025, estimate the flood discharge through the channel.																										

Paper Id: **100707**

Roll No:

--	--	--	--	--	--	--	--	--	--	--	--

**4. Attempt any one part of the following:****10x1=10**

a.	Define evaporation. Discuss the factor that affects the evaporation from a water body.
b.	Distinguish between <ol style="list-style-type: none"> <li>i. Infiltration capacity and infiltration rate.</li> <li>ii. Actual and Potential evapotranspiration</li> </ol>

**5. Attempt any one part of the following:****10x1=10**

a.	What is Hydrograph? Draw a single peaked hydrograph and explain its components.
b.	Describe various types of tubewells.

**6. Attempt any one part of the following:****10x1=10**

a.	The isohyets for annual rainfall over a catchment basin were drawn. The areas of strips between isohyets are indicated below. Find the averagedepth of annual precipitation over the basin.			
	Isohyet (cm)	Area (km <sup>2</sup> )	Isohyet (cm)	Area (km <sup>2</sup> )
	50-60	600	80-90	1010
	60-70	2541	90-100	600
	70-80	8745	100-110	250
b.	Write short notes on: <ol style="list-style-type: none"> <li>i. Flow measuring structures.</li> <li>ii. Mass curve of rainfall</li> <li>iii. Depth area duration curves</li> </ol>			

**7. Attempt any one part of the following:****10x1=10**

a.	Sketch atypical flow duration curve. Also explain how it can be used in water resources planning and development activities?
b.	Explain the rational method of computing the peak discharge of a small catchment. Where it is commonly used and what are its merits and demerits? Also discuss the runoff coefficient C of the rational formula.
