Name of the Course : CBCS B.Sc. Mathematical Sciences / B.Sc. (Prog.)

Unique Paper Code : 42357602

Name of the Paper : DSE- Probability and Statistics

Semester : VI

Duration : 3 Hours

Maximum Marks : 75

Attempt any four questions. All questions carry equal marks.

- 1. Let the random variable *X* be defined as the sum of faces in throwing two unbiased dice. Write the probability distribution of *X*. Find the cumulative distribution function of *X*. Also find mean deviation about mean and variance. Further find the probability that the sum is
 - (i) greater than 9
- (ii) neither 5 nor 7.

Let *X* have the probability density function

$$f(x) = \begin{cases} \frac{3x^2}{8} & 0 < x < 0 \\ 0 & \text{elsewhere} \end{cases}$$

Find the distribution function X and the probability density function of $Y = X^3$.

2. Let

$$f(x) = \begin{cases} ke^{-3x} & \text{for } 0 < x < \infty \\ 0 & \text{otherwise} \end{cases}$$

be the probability density function of a random variable X. Evaluate k. Find 25^{th} percentile, first four moments, mode and the moment generating function of X.

- 3. Suppose that the CGPA scores of a large population of first-year college students are approximately normally distributed with mean 2.5 and standard deviation 0.7. What fraction of the students will have a CGPA more than 3.0?
 - If students possessing a CGPA score less than 1.8 are not promoted to next year, what percentage of the students will not be promoted to next year?
 - Suppose that three students are randomly selected from the first-year student body. What is the probability that all three will possess a CGPA score more than 3.0?

Let X be a geometric random variable with parameter p = 0.4 and let Y = 2X-1. Find E(Y), Var(Y) and the moment generating function of Y.

4. Let *X* and *Y* be the random variables with the joint probability density function

$$f(x,y) = \begin{cases} e^{-(x+y)} & x > 0, y > 0\\ 0 & \text{elsewhere.} \end{cases}$$

- i) Evaluate P(X < 1, Y > 5)
- ii) Evaluate P(X + Y < 3)
- iii) Find the marginal densities of X and Y.
- iv) For any y > 0, find the conditional density function of X given that Y = y.
- v) Evaluate E(X Y) and Var(X Y).
- 5. Let the random variables *X* and *Y* have the joint probability density function

$$f(x,y) = \begin{cases} 3x & 0 < y < x < 1 \\ 0 & \text{elsewhere.} \end{cases}$$

Are X and Y independent? If not, then find $\mu_{Y|x}$ and $\mu_{X|y}$. Also, compute the correlation coefficient between X and Y.

6. Let X be a random variable such that $P(X \le 0) = 0$ and let $\mu = E(X)$ exist. Show that $P(X \le 2\mu) \le \frac{1}{2}$.

Calculate the rank correlation coefficient r_s for the following data representing the statistics grades, x, and psychology grades, y, of 18 students:
