

SECTION-B

2. Find the directional derivative of $u = 5x^2y - 5y^2z + 2.5z^2x$ at the point P (1, 1, 1) in the direction of the line $\frac{x-1}{2} = \frac{y-3}{2} = z$.
3. If $f = (x^2 + y^2 + z^2)^{-n}$. Find n if $\text{div grad } f = 0$.
4. Solve the equation $\frac{d^2y}{dt^2} + 2\frac{dy}{dt} + 3y = \sin t$, $y = \frac{dy}{dt} = 0$, when $t = 0$, by the Laplace transform method.
5. Express $f(x) = x \sin x$, $0 < x < 2\pi$ as a Fourier series.
6. Find the inverse Laplace transform of $\frac{se^{s/2} e^{s^2}}{s^2}$.

SECTION-C

7. Verify Stoke's theorem for the vector field $F = (x + y^2) i - 2xy j$ taken around the rectangle bounded by the lines $x = a, y = 0, y = b$.
8. If $f(x) = \sin x$, $0 \leq x \leq \pi$ and $f(x) = 0$, $-\pi \leq x \leq 0$, Prove that

$$f(x) = \frac{1}{2} \left[\frac{\sin x}{2} + \frac{\cos 2nx}{4n^2 - 1} \right]$$

Hence show that $\frac{1}{1.3} + \frac{1}{3.5} + \frac{1}{5.7} + \dots = \frac{2}{4}$.

9. a) Evaluate :

$$L \left\{ e^{at} \int_0^t \frac{\sin t}{t} dt \right\}$$

- b) Show that $\nabla^2 (r^n) = n(n+1)r^{n-2}$, where $r^2 = x^2 + y^2 + z^2$.

NOTE : Disclosure of Identity by writing Mobile No. or Making of passing request on any page of Answer Sheet will lead to UMC against the Student.
