Roll No .....

## EE-702-GS

#### **B.E. VII Semester**

Examination, December 2020

## Grading System (GS)

#### **Utilization of Electrical Energy**

Time : Three Hours

#### Maximum Marks: 70

*Note:* i) Attempt any five questions.

- ii) All questions carry equal marks.
- 1. a) Explain the designing of circular heating element for electric heating.
  - b) Explain electron beam welding method.
- 2. State the main requirements for an ideal traction system. What are the various traction systems in practice in our Country? Explain
- 3. a) What are the advantages of electric heating? Give the classification of various electric heating methods along with their working principles.
  - b) Explain high frequency eddy current heating.
- 4. a) Enumerate various desirable requirements to satisfy a braking system. Also describe regenerative braking system.
  - b) Discuss the suitability of motors for traction duties.

- 5. a) Give Faraday's laws of electrolysis.
  - b) List the applications of electrolysis.
- Discuss how load conditions and insulating materials 6. a) lised affect the size of motor selected.
  - b) What are relative merits and demerits of various types of electric braking.
- 7. a) What is an electric drive? Classify various types of electric drives and discuss their merits and demerits.
  - b) What is meant by load equalization? Explain how this is achieved in electrical industry.
- 8. Write short notes on any two of the following:
  - Single phase power frequency A.C. traction a)
  - Factors affecting specific energy consumption
- .eq. .g specific .nd special appli \*\*\*\*\*\* Principle and special application of dielectric heating
