

Total No. of Questions : 8]

[Total No. of Printed Pages : 3

Roll No

MCA-102

M.C.A. I Semester

Examination, June 2020

Mathematical Foundation of Computer Science

Time : Three Hours

Maximum Marks : 70

- Note:** i) Attempt any five questions.
ii) All questions carry equal marks.

1. a) If A, B and C are three sets, prove that :
$$A \cap (B \cup C) = (A \cap B) \cup (A \cap C) \quad 7$$
- b) Show that the relation $R = \{(a, b) : a, b \in I \text{ and } a - b \text{ is divisible by } 3\}$ is an equivalence relation. 7
2. a) Find the following statements are contradiction or tautology. 7
- i) $\sim (P \wedge Q) \leftrightarrow (\sim P) \vee (\sim Q)$
- ii) $(P \vee Q) \wedge \{P \vee (\sim Q)\} \wedge \{(\sim P) \vee Q\} \wedge \{(\sim P) \vee (\sim Q)\}$
- b) Define the following terms with examples : 7
- i) Poset
- ii) Chain
- iii) Lattice

[2]

3. a) Prove that the set Z of all integers with binary operation $*$ defined $a * b = a + b + \forall a, b \in Z$ is an abelian group. 7
- b) The intersection of any two normal subgroups of a group is a normal subgroup. 7

4. a) A simple graph with n vertices and K components can have at most $(n - k)(n - k + 1)/2$ edges, prove it. 7
- b) Define a rooted tree, a binary tree and a spanning tree. Prove that every connected graph has at least one spanning tree. 7

5. a) Let a be a numeric function, where : 7

$$a_r = \begin{cases} 0 & , \quad 0 \leq r \leq 2 \\ 2^{-r} + 7, & r \geq 3 \end{cases}$$

find forward and backward difference of a .

- b) Determine the discrete numeric function corresponding to the following generating function : 7

$$A(z) = \frac{z^5}{(5 - 6z + z^2)}$$

6. a) Prove that $7^{2n} + 2^{3n-3} \cdot 3^{n-1}$ is divisible by 25, for all $n \in \mathbb{N}$. 7
- b) Show that the set of integers which are divisors of 60 is partially ordered set. Also draw its Hasse diagram. 7

7. a) Prove that any two right cosets of a subgroup are either disjoint or identical. 7

[3]

- b) Find the shortest path between a and z for the graph. 7

8. a) Define the following : 7
- i) Reducible polynomial
 - ii) Primitive polynomial
 - iii) Switching circuit
- b) Determine the particular solution for the differential equation. 7

$$a_r - 3a_{r-1} + 2a_{r-2} = 2^r$$
